COMPANY PROFILE / 2026

ARANAV

ENGINEERING & INFRA PVT. LTD.

Industrial engineering. From scope to site.

ARANAV Engineering & Infra is an Indian engineering company providing industrial construction, installation, maintenance and project support.

REPRESENTATIVE INDUSTRIAL INSTALLATION

Foundations, steel, equipment, piping and E&I meet around the same installation.

Who ARANAV is.

ARANAV ENGINEERING & INFRA PRIVATE LIMITED

Industrial construction, installation, maintenance, testing and commissioning, supported by technical manpower and project-resource mobilization.

Incorporated on 22 August 2026.

The experience behind the company.

ARANAV is led by professionals with 12+ years of relevant industry experience.

ARANAV was incorporated in 2026. The experience stated here belongs to the professionals leading the company.

Start with the work you need.

Engage ARANAV for a defined service package, technical manpower or a coordinated combination of disciplines. The agreed requirement determines the scope and supporting resources.

Mechanical & Structural

Piping, fabrication, erection and equipment installation.

Electrical & Instrumentation

Power distribution, installation, instrumentation and site systems.

Civil & Infrastructure

Earthworks, foundations and concrete works for industrial sites.

Testing & Commissioning

Testing, inspection, pre-commissioning and commissioning support.

Manpower & Resources

Technical personnel and equipment mobilized to the requirement.

Find the work you need.

Find the scope for your installation, maintenance or project-support requirement. Explore eight service families, available as defined packages or a coordinated combination of disciplines.

01 / PAGE 04
Mechanical & Piping

02 / PAGE 05
Structural Fabrication & Erection

03 / PAGE 06
Equipment Installation & Maintenance

04 / PAGE 07
Electrical & Instrumentation

05 / PAGE 08
Testing, Pre-commissioning & Commissioning

06 / PAGE 09
Civil & Infrastructure Works

07 / PAGE 10
Shutdown, Revamp & Specialist Services

08 / PAGE 11
Technical & Project Manpower

More than one discipline?

The agreed scope determines the combination, responsibilities and resources. Discuss the interfaces between packages alongside the work each one needs to deliver.

Civil foundations	—	Equipment installation
Piping	—	Testing
Structural work	—	Engineering & site support

People & resources / 12-13

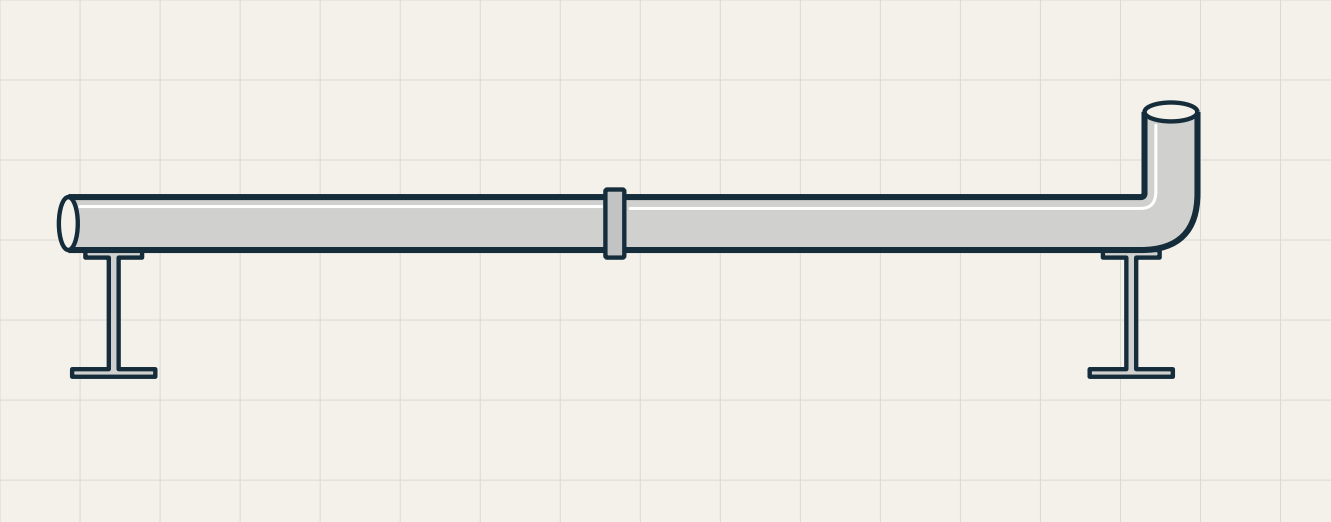

Industrial settings / 14-18

Discuss a requirement / 20

SERVICE / 01

Mechanical & Piping

Mechanical fabrication, piping design and erection for industrial installations and pipelines. Scope includes above-ground, underground and cross-country work, cutting and forming, and boiler-related mechanical work.

Pipe route, supported connection and adjoining spools. Representative scope illustration.

AVAILABLE SCOPE / 7 ITEMS

- Mechanical fabrication and site works
- Piping design and detailing
- Piping fabrication and erection
- Above-ground and underground piping
- Cross-country pipeline fabrication and laying
- Plasma cutting, pipe and plate bending, and dish-end forming
- Boiler-related mechanical work

Discuss your requirement / 20

SERVICE / 02

Structural Fabrication & Erection

Structural design, detailing and review through fabrication, erection, and module and fixture assembly. This package concerns the structure; foundations and concrete remain part of Civil & Infrastructure Works.

Steel frame, receiving column and beam-column connection. Representative scope illustration.

AVAILABLE SCOPE / 5 ITEMS

- Structural design and detailing
- Civil and structural design review
- Structural fabrication
- Structural erection
- Module and fixture assembly

Discuss your requirement / 20

SERVICE / 03

Equipment Installation & Maintenance

Installation, erection and alignment for static and rotating equipment, alongside equipment maintenance and machinery repair. Define the equipment, condition and site work required.

Vessel, saddles and mounting layers; one static-equipment interface. Representative scope illustration.

AVAILABLE SCOPE / 6 ITEMS

- Static-equipment installation and erection
- Rotating-equipment installation and erection
- Equipment alignment
- Static-equipment maintenance
- Rotating-equipment maintenance
- Machinery repair and maintenance

Discuss your requirement / 20

SERVICE / 04

Electrical & Instrumentation

Power distribution, panels and drives, motors, cabling and field instruments. Associated systems include fire and gas, cathodic protection, telecom, IT and CCTV installation.

Equipment, cable containment and field instrumentation. Representative scope illustration.

AVAILABLE SCOPE / 8 ITEMS

- Electrical layout and design support
- Power distribution, transformer installation and energization, and switchgear installation
- PMCC and motor-control-centre panel installation; variable-frequency drive installation
- Motor and lighting installation; earthing and cathodic-protection installation
- Cable laying, glanding and termination
- Field instrument and transmitter installation; instrument power-on support
- Fire and gas system installation
- Telecom, IT and CCTV system installation

SERVICE / 05

Testing, Pre-commissioning & Commissioning

Pressure testing, NDT, electrical checks and instrument calibration, plus flushing, blowing, pre-commissioning, commissioning and trial-run support. Scope also includes project QA/QC inspection and commissioning documentation.

Inspection locations and tool-to-material contact; no test result is depicted. Representative scope illustration.

AVAILABLE SCOPE / 9 ITEMS

- Hydrotesting, pneumatic testing and pressure-testing support
- Non-destructive testing: liquid penetrant testing, magnetic particle inspection and ultrasonic thickness gauging
- Electrical testing
- Instrumentation testing and calibration
- Flushing and blowing
- Pre-commissioning and commissioning
- Static-equipment, rotating-equipment and control-valve commissioning support
- Rotating-equipment trial-run support
- Project QA/QC inspection services and commissioning documentation

SERVICE / 06

Civil & Infrastructure Works

Site preparation and earthworks, foundations, concrete, flooring and masonry, plus grouting and landscaping. Civil work supports industrial installations and wider facility requirements.

Installation loads meet their supporting foundations and bearing interfaces. Representative scope illustration.

AVAILABLE SCOPE / 7 ITEMS

- Earthworks, excavation, grading and levelling
- Backfilling and compaction
- Industrial equipment and building foundations
- Plain and reinforced concrete work
- Concrete floors, flooring and masonry
- Grouting
- Landscaping

SERVICE / 07

Shutdown, Revamp & Specialist Services

Shutdown, turnaround, revamp and modification work, plus scaffolding, insulation, controlled bolting, post-weld heat treatment and protective coating. Specialist activities can be engaged individually or as part of a shutdown package.

A bounded modification workfront within an existing installation. Representative scope illustration.

AVAILABLE SCOPE / 7 ITEMS

- Shutdown execution and turnaround works
- Revamp and modification
- Scaffolding
- Insulation
- Bolt torquing and tensioning
- Post-weld heat treatment
- Surface preparation and industrial painting / protective coating

SERVICE / 08

Technical & Project Manpower

Engineering and project coordination, QA/QC, HSE, supervision, execution and supporting trades, mobilized to the work. Engage defined roles; see pages 12-13 for the fuller personnel and resource categories.

Engineering, coordination and inspection relate to a defined work package. Representative scope illustration.

AVAILABLE SCOPE / 7 ITEMS

- Engineering: mechanical, piping, structural, electrical, instrumentation and design engineers
- Project coordination: project and site management, planning, estimation, procurement and billing
- QA/QC: engineers and inspectors
- HSE: officers and safety managers
- Site supervision: site supervisors and equipment-erection supervision
- Execution trades: fabricators, fitters, welders, riggers, electricians and instrument technicians
- Supporting trades: scaffolders, insulators, painters, skilled and semi-skilled labour, and helpers

Discuss your requirement / 20

People for the defined work.

Engineering, coordination, QA/QC, HSE, supervision and trades contribute different kinds of support. The required roles and quantities are agreed for the work.

Engineering

Provide discipline-specific technical input for the agreed work.

Mechanical
Piping
Structural
Electrical
Instrumentation
Design engineers

Project Coordination

Coordinate the package, its planning and project administration.

Project management
Site management
Planning
Estimation
Procurement
Billing

QA/QC

Support inspection and quality requirements for the agreed scope.

Engineers
Inspectors

HSE

Provide safety roles aligned with relevant site requirements.

Officers
Safety managers

Site Supervision

Connect day-to-day site activities with the agreed work requirements.

Site supervisors
Equipment-erection supervision

Execution Trades

Carry out fabrication, installation and associated site work.

Fabricators
Fitters
Welders
Riggers
Electricians
Instrument technicians

Supporting Trades

Support access, preparation and associated activities around the workfront.

Scaffolders · Insulators · Painters · Skilled/semi-skilled labour · Helpers

Deployment and mobilization depend on the scope, site conditions and schedule.

Resources matched to the requirement.

ARANAV can mobilize welding, fabrication, cutting, testing, lifting and site-support resources according to project requirements. The available categories support mechanical and structural execution, electrical and instrumentation work, and specialist site activities.

Welding & Fabrication

Welding machines, Argon/TIG, MIG and submerged-arc welding sets; rectifiers and welding generators; electrode ovens, pipe stands and fabrication tools.

Cutting, Forming & Preparation

Gas and plasma cutting, grinding, drilling and punching equipment; pipe and plate bending, dish-end forming, surface-preparation and painting tools.

Testing, Inspection & Specialist Tools

Hydrotest setups, pumps, pressure gauges and accessories; liquid penetrant, magnetic particle and ultrasonic thickness resources; torque tools and PWHT equipment.

Lifting, Erection & Material Handling

Mobile and pick-and-carry cranes, slings and lifting accessories, powered winches, chain pulley blocks, material-handling equipment and erection tools.

Power, Air & Site Utilities

Generator sets, air compressors and water tankers.

Electrical & Instrumentation Testing

Electrical test equipment and instrumentation test equipment.

Site Infrastructure & Transport

Scaffolding systems, site office/store containers, trailers and material transport vehicles, including trucks, pickups and tractor-and-trolley transport.

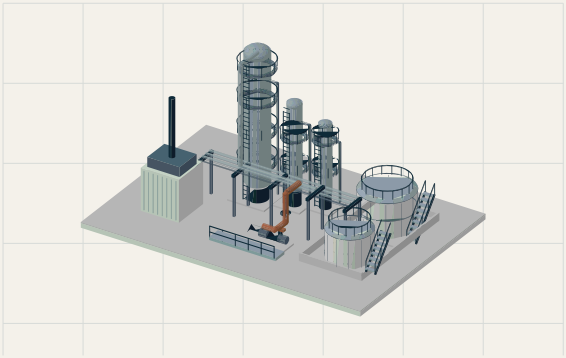

The work determines the combination.

Discuss scope, site conditions and timing together.

TARGET SECTORS & PROJECT SETTINGS

Process & Energy

Representative contexts, not completed ARANAV projects. Settings may overlap; linked services are scopes to explore.

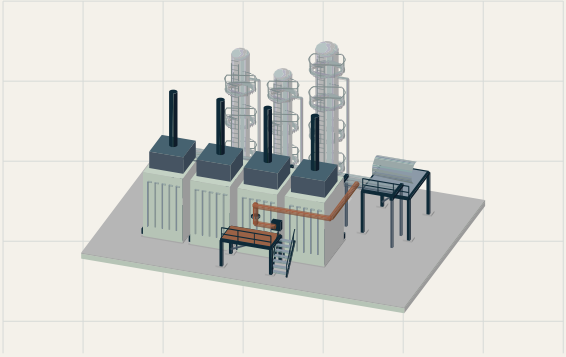

REPRESENTATIVE SETTING

Refinery

Distillation units, tanks and pipe racks bring equipment, piping and maintenance work together.

SCOPES TO EXPLORE

Mechanical & Piping
Equipment Installation & Maintenance
Shutdown, Revamp & Specialist Services

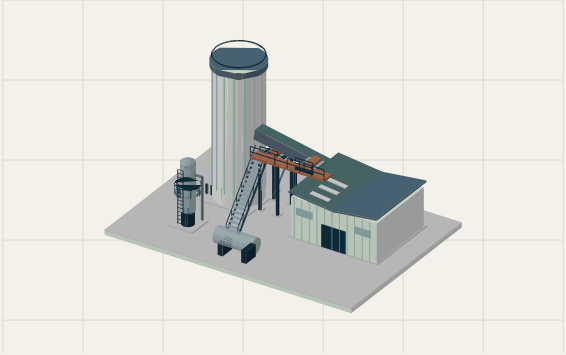

REPRESENTATIVE SETTING

Petrochemical

Interconnected process units rely on equipment connections, shared pipework and supporting steel.

SCOPES TO EXPLORE

Mechanical & Piping
Structural Fabrication & Erection
Equipment Installation & Maintenance

REPRESENTATIVE SETTING

Fertilizer

A urea prilling tower and product handling illustrate one plant example, with equipment, steelwork and piping interfaces.

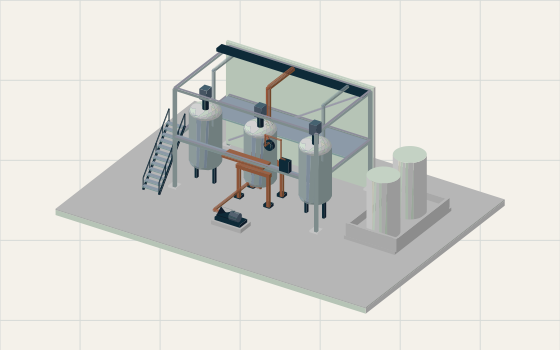

SCOPES TO EXPLORE

Structural Fabrication & Erection
Equipment Installation & Maintenance
Mechanical & Piping

TARGET SECTORS & PROJECT SETTINGS

Process & Energy

Representative contexts, not completed ARANAV projects. Settings may overlap; linked services are scopes to explore.

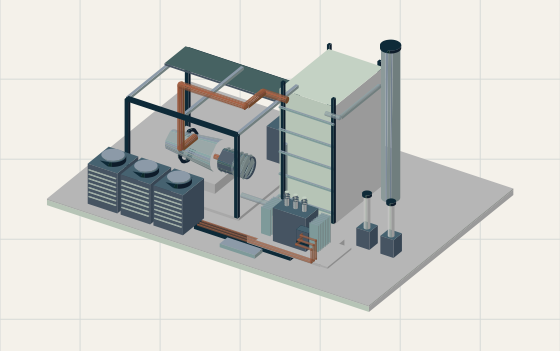

REPRESENTATIVE SETTING

Chemical

Reactors, pumps and tanks connect through process piping and field instrumentation.

SCOPES TO EXPLORE

Equipment Installation & Maintenance
Mechanical & Piping
Electrical & Instrumentation

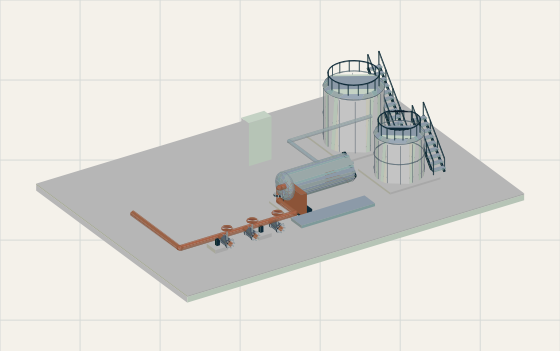

REPRESENTATIVE SETTING

Power

A thermal-generation bay illustrates one setting where machinery, boiler-side piping and electrical systems meet.

SCOPES TO EXPLORE

Equipment Installation & Maintenance
Electrical & Instrumentation

REPRESENTATIVE SETTING

Oil & Gas

A separation skid, valve manifold and connecting pipeline show equipment and flowline interfaces.

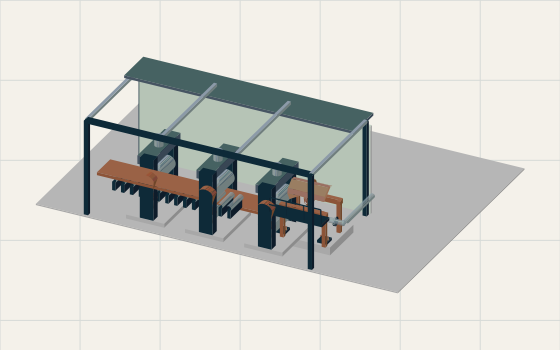

SCOPES TO EXPLORE

Mechanical & Piping
Equipment Installation & Maintenance

TARGET SECTORS & PROJECT SETTINGS

Heavy Industry & Manufacturing

Representative contexts, not completed ARANAV projects. Settings may overlap; linked services are scopes to explore.

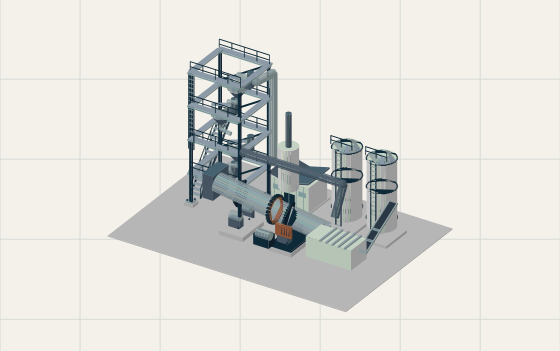

REPRESENTATIVE SETTING

Steel

A rolling-mill bay connects industrial machinery, supporting steelwork and electrical services.

SCOPES TO EXPLORE

Structural Fabrication & Erection
Equipment Installation & Maintenance
Electrical & Instrumentation

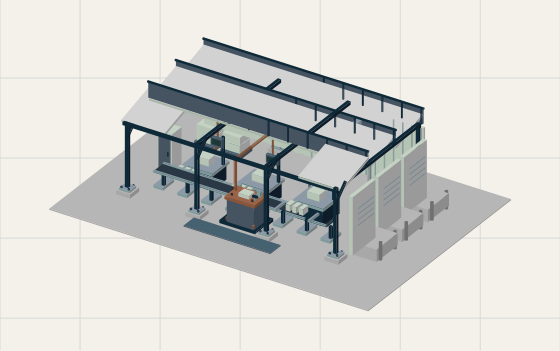

REPRESENTATIVE SETTING

Cement

Kiln equipment, process connections and supporting foundations form distinct mechanical and civil scopes.

SCOPES TO EXPLORE

Mechanical & Piping
Equipment Installation & Maintenance
Civil & Infrastructure Works

REPRESENTATIVE SETTING

Manufacturing

Production machinery, a factory structure and utility connections define the work around a manufacturing line.

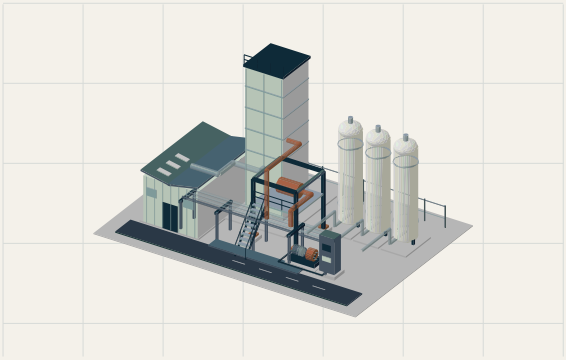

SCOPES TO EXPLORE

Equipment Installation & Maintenance
Structural Fabrication & Erection
Electrical & Instrumentation

TARGET SECTORS & PROJECT SETTINGS

Industrial Development & Infrastructure

Representative contexts, not completed ARANAV projects. Settings may overlap; linked services are scopes to explore.

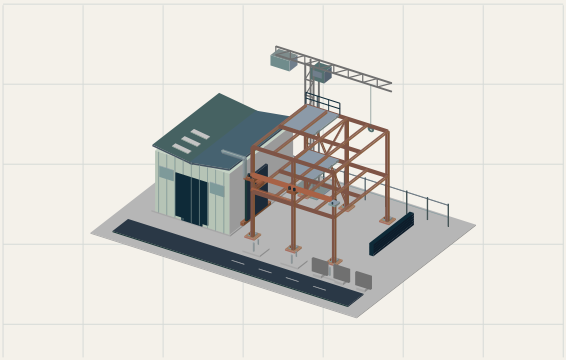

REPRESENTATIVE SETTING

Industrial and process plants

Foundations, steel, equipment, piping and E&I meet around the same installation.

SCOPES TO EXPLORE

Equipment Installation & Maintenance
Mechanical & Piping
Structural Fabrication & Erection

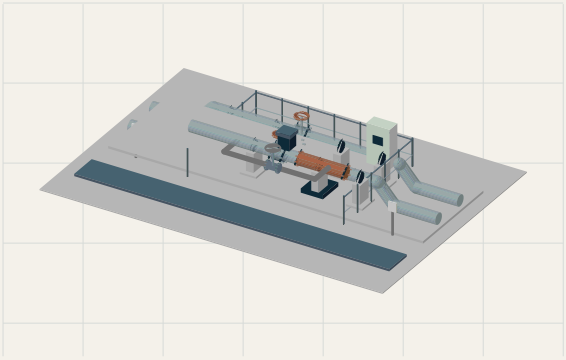

REPRESENTATIVE SETTING

Industrial construction and facility upgrades

An extension to an existing bay creates foundation, structural and service tie-in requirements.

SCOPES TO EXPLORE

Structural Fabrication & Erection
Civil & Infrastructure Works
Mechanical & Piping

REPRESENTATIVE SETTING

Industrial pipelines

A defined pipeline corridor connects fabrication and installation with testing and associated civil works.

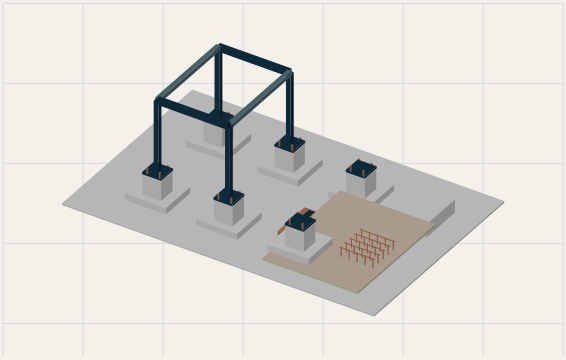

SCOPES TO EXPLORE

Mechanical & Piping
Testing, Pre-commissioning & Commissioning
Civil & Infrastructure Works

TARGET SECTORS & PROJECT SETTINGS

Industrial Development & Infrastructure

Representative contexts, not completed ARANAV projects. Settings may overlap; linked services are scopes to explore.

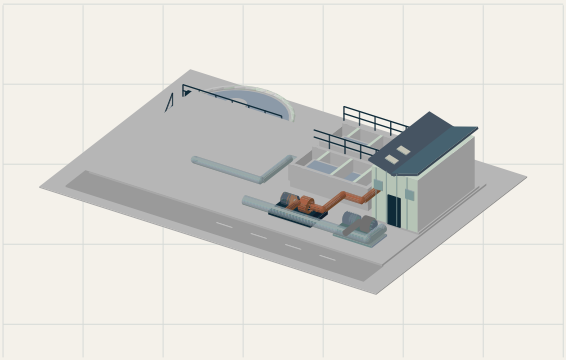

REPRESENTATIVE SETTING

Infrastructure

Industrial site preparation, foundations and structural bases support facility development.

SCOPES TO EXPLORE

Civil & Infrastructure Works
Structural Fabrication & Erection

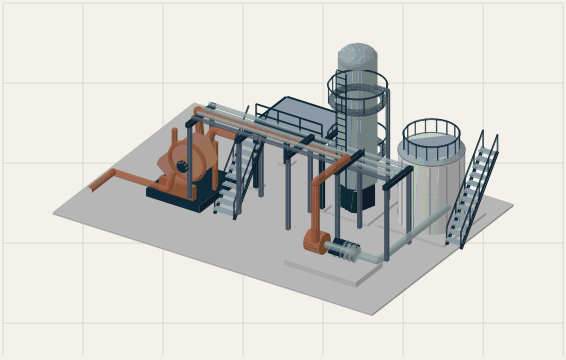

REPRESENTATIVE SETTING

Utilities

Pumps, water storage and service headers connect utility equipment with pipework and supporting foundations.

SCOPES TO EXPLORE

Equipment Installation & Maintenance
Mechanical & Piping
Civil & Infrastructure Works

REPRESENTATIVE SETTING

Other process industries

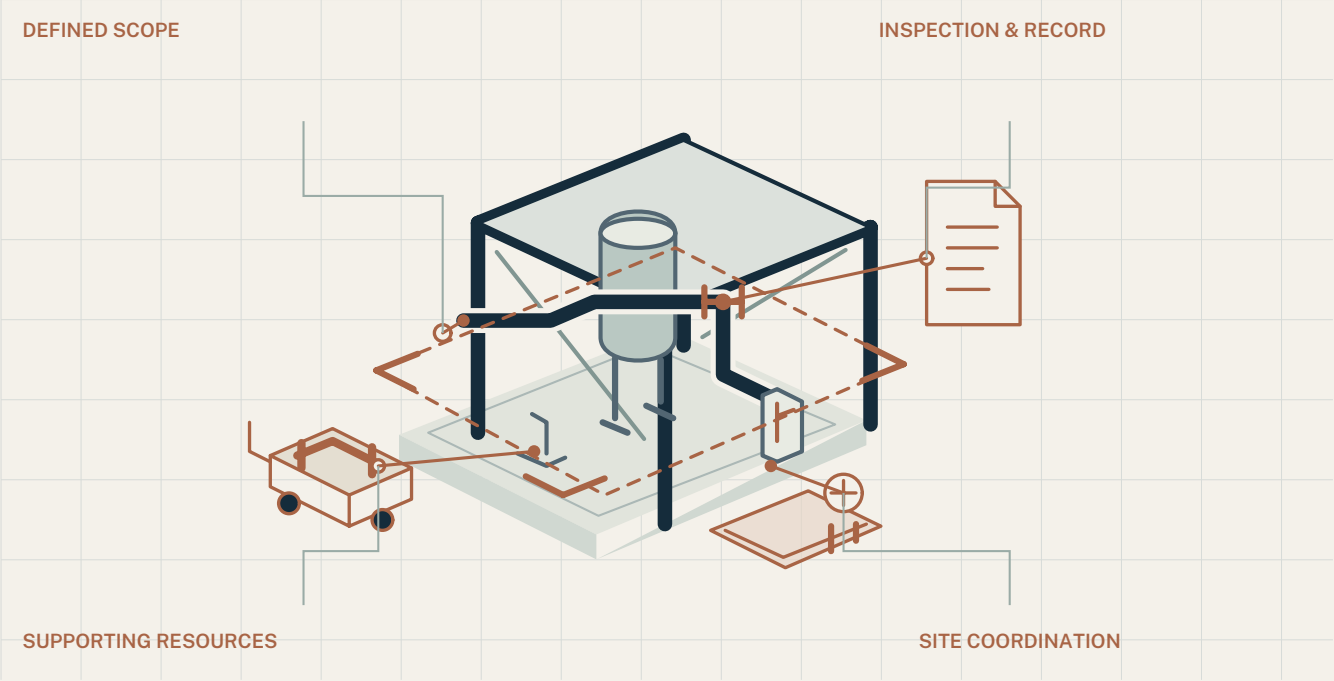

A vessel, pump and process skid illustrate common interfaces. Discuss the work within your actual setting.

SCOPES TO EXPLORE

Equipment Installation & Maintenance
Mechanical & Piping
Structural Fabrication & Erection

How we approach the work.

Working principles around the agreed scope.

Representative schematic. Boundaries, interfaces, resources and records relate to the same work.

Scope Coordination

Establish clear work boundaries and coordination points between disciplines.

Project-Specific Mobilization

Match manpower, tools and equipment to the work required.

Disciplined Site Practices

Plan supervision and execution around applicable project requirements.

Inspection & Documentation

Include the testing and records required for the agreed scope.

These principles coexist around the agreed scope; the drawing is not a project procedure.

Discuss your requirement.

Bring a defined work package, a manpower or resource requirement, or an early scope discussion. Share what you know.

The email action opens your email app with an editable outline. You send the message there. You can also copy the address above.

A useful starting point

Helpful prompts, not mandatory fields. A fully specified project is not required.

Work required	The work you need or the broad scope you want to discuss.
Site location	The project or site location.
Stage & timing	The current stage, expected timing or duration.
People & resources	Required disciplines, roles, quantities or resources, where known.
Site requirements	Relevant site, quality, safety or testing requirements, where known.
